21 - What class activity or assignment did you like the best and why?

Natalia Guggisberg

Response Rate 5/12 (41.67%)

- Leaving when it was over.
- RF factor because we got to do tests on each other and our selves
- I enjoyed the few lab activities we did.
- The class activity I enjoyed the most was dipstick urinalysis as it was very interesting to see what healthy urine looked like compared to unhealthy urine.
- Rarely did any class activities

22 - What class activity or assignment was the least useful and why?

Natalia Guggisberg

Response Rate 5/12 (41.67%)

- PowerPoint lectures because there was no information being explained just read.
- lectures, little relevant information was given
- I think the multiple hours of doing the same things over and over was redundant and not useful for proper comprehension of the course contents.
- The homework Assignment that contained 192 questions. That took 9 hours of my day off that I needed to complete an exam. The questions were not even relative to the quiz we had to take that Friday. It was not useful in the slightest.
- Most of the things we did, lack of organization, lack of understanding on her part, and overall terrible use of time

Response Rate: 7/12 (58.33 %)

23 - What specific recommendations do you have for the course or instructor?

Natalia Guggisberg

Response Rate 4/12 (33.33%)

- Some who enjoys teaching who also has a background in this field.
- Using new content materials
- This instructor needs to gather their thoughts and take time to answer questions. If a student asked a question, she would refer you to the book or would avoid answering the question completely by deflecting. This is not what students need. This instructor also was very basic in their explanations of important subject matter. They sped through the subjects and were not very hands on. Some students such as I had a very hard time trying to understand what was being taught. I have multiple ways of learning however in this type of class just listening is not what is needed for this class, yet there was no hands-on development or any way to get critical thinking during lecture. Critical thinking is necessary, and real-life scenarios or examples were never truly used. This class was very hard for the first 11 weeks because the instructor did not answer questions and sped through the materials.
- She needs to work on her teaching skills majorly, we are not robots and need to be TAUGHT.

24 - The instructor explained the materials and equipment to be used in lab.

Natalia Guggisberg
